SUMMARY

Data Science Master's student specializing in **SQL-based analytics, KPI development, and business intelligence dashboards**. Applied **Python (Pandas, NumPy) and SQL** to process large operational datasets, perform **EDA**, and build **analysis-ready data models for KPI reporting and forecasting**. Built dashboards and analytical pipelines that **reduce manual reporting and highlight key business trends and performance drivers**. Targeting **Data Analyst / Product Analyst** roles with focus on business metrics and experimentation.

EDUCATION

Masters in Data Science

Jan 2025 – Dec 2026

The University of Texas at Arlington, TX | **GPA: 3.8**

Relevant Coursework: Data Mining, Neural Network and Deep Learning, Convex Optimization, Cloud Computing and Big Data

Bachelor of Engineering in Artificial Intelligence and Machine Learning

Aug 2020 – May 2024

Savitribai Phule Pune University, India | **GPA: 8.2**

Relevant Coursework: Artificial Intelligence, Machine Learning, Natural Language Processing, Database Management Systems, Big

TECHNICAL SKILLS

Programming & Querying: Python (Pandas, NumPy), SQL (Joins, Window Functions, CTEs, Query Optimization)

Data Analysis: Exploratory Data Analysis (EDA), Data Cleaning, Data Validation

Statistical Analysis & Experimentation: Hypothesis Testing, A/B Testing, Descriptive Statistics

Business Intelligence & Visualization: Power BI, Tableau, Dashboard Development

Data Modeling & Warehousing: Data Modeling (Star/Snowflake), PostgreSQL, MySQL, BigQuery

Product & Business Analytics: KPI Development, Funnel Analysis, Cohort Analysis, Retention Analysis

Data Engineering (Analytics): ETL Pipelines, Data Transformation

Machine Learning (Applied Analytics): Scikit-learn, XGBoost, Feature Engineering

Cloud & Tools: Google Cloud Platform, Git, Docker, Jira, Salesforce

WORK EXPERIENCE

Junior Data Analyst

Jun 2023 – Sep 2024

IVS Software Solutions — Pune, India

- Processed and transformed **80K–150K records** using **Python (Pandas, NumPy) and SQL**, enabling **reliable reporting and faster business decision-making**.
- Conducted **EDA** to uncover trends, anomalies, and data quality issues, improving **data processing efficiency by 30%** and increasing reporting accuracy.
- Optimized **SQL pipelines** (joins, aggregations), reducing data preparation time by **40%** and accelerating **dashboard delivery for stakeholders**.

PROJECTS

AI Data Governance Model | PostgreSQL, dbt, Python, Power BI

Mar 2026

- Built an AI-assisted data governance platform monitoring **150K+ GitHub events**, enforcing **automated data quality rules** across **6+ datasets** using **PostgreSQL, dbt, and Python**.
- Designed **metadata layer** and **rule engine** with **incident detection** and **AI-based explanations**, surfaced via **Power BI dashboards** for continuous data health monitoring.

SQL Retail Analytics & Inventory Optimization Dashboard | SQL, Python, Streamlit, Pandas, Plotly

Jan 2026

- Engineered a data pipeline transforming **541K+ transactions** into **analytical models (facts/dimensions)**, enabling scalable reporting and inventory analysis.
- Performed **ABC analysis** identifying **top 20% products** driving **75% revenue**; **automated dashboards** reduced **manual reporting by 3–4 hours weekly**.

Customer Churn Prediction with SHAP Explainability | Python, Scikit-learn, XGBoost, SHAP, Pandas

Dec 2025

- Developed **XGBoost churn model** on **7K+ customers (ROC-AUC 0.84)**, improving recall by **18%** through feature engineering and class imbalance handling.
- Applied **SHAP explainability** to identify key churn drivers, enabling **targeted retention strategies** and actionable business insights.
